

# EVENT BLUEPRINT: THE MOSAIC CHASE (FINAL UNCONNECTED VER)

**Core Concept:** A high-stakes, two-player cooperative challenge bridging pure computational logic with adaptive human instinct. Teams split up, conquer distinct cognitive realms simultaneously, and reunite to piece together a fragmented reality.

## The Overarching Lore: The Scattered Nexus

For centuries, the *Nexus Mosaic*—a legendary cosmic artifact—maintained the perfect balance between advanced technology and human resourcefulness. But an unexpected system anomaly has shattered the Mosaic into 36 glowing fragments, casting them across two deeply isolated, completely disconnected parallel dimensions: the **Technology Realm** and the **Aptitude Realm**. As elite "Architects," your team of two has been deployed into these separate realities to recover the fragments. Both players operate simultaneously at their own pace, entirely independent of what the other is doing. Neither realm affects the mechanics of the other. However, each player's individual tasks tell a continuous chronological story within their own world. Each realm holds exactly 18 pieces of the puzzle. Once time runs out, the fragments must be synced to a single device, where both players race against the clock to rebuild the Nexus Mosaic and restore order.

## Structure & Timeline

| Phase                      | Duration        | Objective                                                                                                         |
|----------------------------|-----------------|-------------------------------------------------------------------------------------------------------------------|
| Phase 1: Parallel Realms   | 35 – 45 Minutes | Simultaneous challenge solving. Each player operates independently at their own pace to collect 18 puzzle pieces. |
| Phase 2: The Jigsaw Fusion | 10 – 15 Minutes | Consolidate all 36 pieces onto one device. Collaborate side-by-side to solve the 6x6 Jigsaw Puzzle.               |

## Realm 1: The Technology Realm (Player 1)

### Sub-Storyline: The Shadow Grid Chronicles

Player 1 is injected into the *Shadow Grid*, a forgotten, abstract deep-layer network. The player's journey follows a sequential digital expedition to breach a secure central core. Each task represents a deeper layer of security that must be dismantled using zero-coding visual algorithm simulations.

- **Task 1: The Gateway Gateways (The Spire of Hanoi)**
  - *Story Continuity:* The journey begins at the outer wall of the Shadow Grid. The perimeter defense system is completely locked up by data deadlocks. To boot up the hacking console and unlock the gateway to the next layer, Player 1 must clear the data spires.
  - *Gameplay Logic:* The participant interacts with a visual simulation featuring 3 target spires (servers) and a stack of multi-sized discs (data files). Following strict mathematical rules, the player must move the entire stack to the destination spire. Only one disc can be moved at a time, and a larger disc can never be placed on top of a smaller disc.
  - *Reward:* 6 Puzzle Pieces
- **Task 2: The Mainframe Core (The Matrix Defense / N-Queens)**
  - *Story Continuity:* Having broken past the outer gateway, Player 1 penetrates deep into the mainframe database. Suddenly, automated anti-virus bots launch a counter-attack. The player must rapidly stabilize the system by deploying 8 elite defensive firewalls across the central network grid to block incoming traffic.
  - *Gameplay Logic:* The player is presented with an interactive 8x8 grid. They must place exactly 8 firewall nodes (Queens) such that no two nodes threaten each other. The system enforces classic algorithm constraints: no two firewalls can share the same row, column, or diagonal line.
  - *Reward:* 6 Puzzle Pieces
- **Task 3: The Data Safehouse (The Pathfinding Protocol / Dijkstra)**
  - *Story Continuity:* With the counter-attack neutralized, the central data archive is exposed. The ultimate vault signature is uncovered, but it is hosted on a chaotic network structure. To extract the file and complete their mission before a full system lockdown occurs, Player 1 must calculate the absolute quickest route through the server cluster.
  - *Gameplay Logic:* The player sees a visual graph map containing multiple labeled nodes connected by lines showing latency/distance weights. The player must click through the nodes to trace the definitive mathematically shortest path from the source node to the target node based on Dijkstra's logic.
  - *Reward:* 6 Puzzle Pieces

---

## Realm 2: The Aptitude Realm (Player 2)

### Sub-Storyline: The Outpost 9 Survival Record

Player 2 materializes as a survival specialist trapped inside a deteriorating underground facility known as *Outpost 9*. The story flows chronologically as the player systematically manages a

collapsing bunker environment, progressing from saving life-support to making a tactical escape.

- **Task 1: Preventing Core Meltdown (The Hydro-Logic Matrix)**
  - *Story Continuity:* The player wakes up to sirens screaming. The facility's backup cooling generator is dangerously overheating and will explode within minutes. The automatic systems are dead, requiring the player to perform an immediate emergency fluid dump.
  - *Gameplay Logic:* The player is given an unmarked 5-liter container, an unmarked 3-liter container, and an infinite water tap. Through a sequence of logical pouring operations, they must mathematically isolate exactly 4 liters of heavy water to stabilize the cooling core and prevent immediate destruction.
  - *Reward:* 6 Puzzle Pieces
- **Task 2: Restoring the Communications Array (The Chrono-Fuse Override)**
  - *Story Continuity:* The core is cooled, but the facility is plunged into complete isolation. The communications room is sealed shut by a safety lock, and the internal digital clocks are fried. To open the antennas and transmit an SOS signal to the outside world, the player must track a precise operational window using archaic equipment.
  - *Gameplay Logic:* The player's only tools are two unique, unevenly burning chemical fuses (or ropes), each of which takes exactly 60 minutes to burn completely from end to end. The player must figure out how to light the fuses in a specific sequence to track a precise 45-minute window to trigger the manual override.
  - *Reward:* 6 Puzzle Pieces
- **Task 3: The Evacuation Directive (The Triage Protocol)**
  - *Story Continuity:* The manual override succeeds, the SOS transmission goes out, and the main extraction lift powers up! However, toxic gas is now filling the ventilation system, structural damage is spreading, and the elevator has strict capacity safety parameters. The player must choose the final rescue group.
  - *Gameplay Logic:* The player is presented with a clear logistical scenario involving 5 stranded bunker personnel with unique weights, critical skills, and health statuses. They must solve a multi-variable optimization constraint problem to transport the maximum volume of critical crew elements using the lift under the exact structural capacity before oxygen hits zero.
  - *Reward:* 6 Puzzle Pieces

---

## The Final Phase: The Jigsaw Fusion

**Time Aligned: 10 – 15 Minutes | Target: Assemble the 6x6 Grid**

Both players complete their independent narrative paths entirely at their own pace. The moment the round time limit expires, the isolation barriers drop. Player 1 and Player 2 must immediately sync and transmit their accumulated 18-piece digital batches onto a single designated screen. Working side-by-side on one interface, they must collaborate to solve the comprehensive **36-piece (6x6) mosaic jigsaw puzzle**. The finalized image reveals the cohesive structural blueprint of the restored Nexus Mosaic. The team that successfully fits the edges, snaps the final mosaic shard into place, and clicks "Submit" with the fastest combined time wins the competition!
